- Lumen ID is the nation's first comprehensive online seller of custom engraved switch plates
- Engraved switch plates help people quickly identify the function of each switch. This is helpful whenever switches are ganged together or when a switch is located remotely from its function (such as exterior flood lights or landscape lights, pool lights, etc).
- Over 650 different switchplates offered for engraving. Our switchplates are from major manufacturers such as Leviton® and Lutron®.
- 6 engraving styles
  - **Simplicity™** : our most popular style which is simple 1/8" text located at the top of the switchplate
  - **Borderline™** : same text as the Simplicity™ style, but bounded by a thin box to give the plate 'architectural' detail
  - **Easyread™** : This is our largest text option. The 1/4" text is positioned vertically adjacent to each switch with an engraved box that helps associate the text with the correct switch
  - **Headline™** : This style incorporates a large 1/4" font spanning the top of the switch plate with 1/8" text labels under each switch location
  - **Doubletext™** : This style has 1/8" text located at the top and bottom of each switch, which allows for the labeling of Decora Double-stacked switches, or if additional text is desired at a switch location

- **Triplettext™** : This style has 1/8" text located at the top, bottom, and side of each switch. It is specifically developed for Decora Triple-stacked switches
- 12 Font choices from simple, to ornate, to fun fonts for your kid's room
- 11 paint fill options and actual examples of each displayed on our website at <http://store.lumenid.com/paintfill.html>
- Engraving in foreign languages available at no additional cost. See our website at <http://store.lumenid.com/languages.html>
- Mail in your own switch plates – currently available for Lutron® Claro and Leviton® Decora-Plus snap-on switch plates
- Custom Orders – we can produce a custom design in any quantity. We have produced custom switch plates for individuals as well as companies, including one of the nation's largest lighting manufacturer's
- Useful for controlling lights, window shades, audio & visual controls, and other equipment
- Turning off lights is one of the easiest ways to save energy. Lumen ID's custom engraved switch plates help people know what lights to turn off
